

Temporary Hand Wash Station for Special Events

At a minimum, temporary handwashing stations must consist of an insulated container (20L) with a spigot that provides continuous free-flowing warm water. Hot water can be provided using a coffee urn, kettle or pot of boiling water. A bucket to collect the waste water must also be in place. This type of a temporary handwashing station must be set up on an elevated surface (e.g., table).

The handwashing station must be:

- placed in a convenient location for all food handlers,
- used only for handwashing, and
- set up before handling food.

Each handwashing station must be provided with:

- Liquid soap in a dispenser,
- Paper towels in a dispenser, and
- A container to collect the waste water (30 L)

In some cases, vendors will be required to provide portable or free-standing handwashing station with hot and cold running water under pressure.
